AUTO

POPULATION SIZE, MIGRATION, DIVERGENCE, ASSIGNMENT, HISTORY

Bayesian inference using the structured coalescent

Migrate-n version 5.0.0a [May-20-2017]

Using Intel AVX (Advanced Vector Extensions)

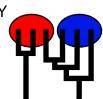

Compiled for PARALLEL computer architectures

One master and 8 compute nodes are available.

Compiled for a SYMMETRIC multiprocessors (Grandcentral)

Program started at Sun Jan 7 12:31:04 2018

Program finished at Sun Jan 7 12:44:08 2018 [Runtime:0000:00:13:04]

Options

Datatype: DNA sequence data

Inheritance scalers in use for Thetas:

All loci use an inheritance scaler of 1.0

[The locus with a scaler of 1.0 used as reference]

Random number seed: (with internal timer) 1444396460

Start parameters:

Theta values were generated Using a percent value of the prior

M values were generated Using a percent value of the prior

Connection matrix:

m = average (average over a group of Thetas or M,

s = symmetric migration M, S = symmetric 4Nm,

0 = zero, and not estimated,

* = migration free to vary, Thetas are on diagonal

d = row population split off column population, D = split and then migration

Population

1 Romanshorn 0

Order of parameters:

1 Θ_1 <displayed>

Mutation rate among loci: Mutation rate is constant for all loci

Analysis strategy: Bayesian inference

-Population size estimation: Exponential Distribution

Proposal distributions for parameter

Parameter Proposal
Theta Metropolis sampling
M Metropolis sampling
Divergence Metropolis sampling
Divergence Spread Metropolis sampling
Genealogy Metropolis-Hastings

Prior distribution for parameter

Parameter Prior Minimum MeanMaximum Delta Bins UpdateFreq
1 Theta -11 Uniform 0.000000 0.050 0.100 0.010 1500 0.20000

[-1 -1 means priors were set globally]

Markov chain settings: Long chain

Number of chains 1

Recorded steps [a] 5000
Increment (record every x step [b] 20

Number of concurrent chains (replicates) [c] 2

Visited (sampled) parameter values [a*b*c] 200000

Number of discard trees per chain (burn-in) 1000

Multiple Markov chains:

Static heating scheme 4 chains with temperatures

1000000.00 3.00 1.50 1.00

Swapping interval is 1

Print options:

Data file: infile.0.4

Haplotyping is turned on:

Output file: outfile_0.4_0.6

Posterior distribution raw histogram file: bayesfile

Raw data from the MCMC run: bayesallfile_0.4_0.6

Print data: No

Print genealogies [only some for some data type]:

Data summary

Data file: infile.0.4
Datatype: Sequence data
Number of loci: 100

Bayesian Analysis: Posterior distribution over all loci

Log-Probability of the data given the model (marginal likelihood)

Use this value for Bayes factor calculations: $BF = Exp[\ ln(Prob(D \mid thisModel) - ln(\ Prob(\ D \mid otherModel)) \\ or \ as \ LBF = 2 \ (ln(Prob(D \mid thisModel) - ln(\ Prob(\ D \mid otherModel))) \\ shows the \ support for \ thisModel]$

Average temperatures during the run

Chain Temperatures

- 1 0.00000
- 2 0.00000
- 3 0.00000
- 4 0.00000

Adaptive heating often fails, if the average temperatures are very close together try to rerun using static heating! If you want to compare models using marginal likelihoods then you MUST use static heating

Potential Problems

This section reports potential problems with your run, but such reporting is often not very accurate. Whith many parameters in a multilocus analysi s, it is very common that some parameters for some loci will not be very informative, triggering suggestions (for example to increase the prior ran ge) that are not sensible. This suggestion tool will improve with time, therefore do not blindly follow its suggestions. If some parameters are fla

| gged, inspect the tables carefully and judge wether an action is required. For example, if you run a Bayesian |
|---|
| inference with sequence data, for mac roscopic species there is rarely the need to increase the prior for Theta |
| beyond 0.1; but if you use microsatellites it is rather common that your prior distribution for Theta should have |
| a range from 0.0 to 100 or more. With many populations (>3) it is also very common that some migration rou |
| tes are estimated poorly because the data contains little or no information for that route. Increasing the range will |
| not help in such situations, reducing number of parameters may help in such situations. |
| |
| |
| No warning was recorded during the run |
